Abstract (Basic): EP 1139256 A1

NOVELTY - A low resolution digital image is uploaded over the Internet to the sever. The image is manipulated to show the user previews of the goods that can be purchased then a high resolution image is uploaded to make the final product. The low resolution image can be no greater that 200 by 150 pixels and the high resolution image can be no smaller than 780 by 560 pixels.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is made for a system for manipulating and ordering goods featuring images over The Internet.

USE - For Internet sites where goods such as gifts, image imprinted articles and enlargements based on digital images are sold.

ADVANTAGE - Goods are able to be ordered without having to wait for a high resolution image file to be uploaded to the server.

DESCRIPTION OF DRAWING(S) - The drawing is a schematic diagram of the system.

ABSTRACT EP 1139256 A1

A method and system for ordering digital image goods and/or services with respect to an image provided as a low resolution digital file and a low resolution digital image file. The method includes transmitting the low resolution digital image file to a server at a remote image service provider over a communication network, manipulating the image and/or ordering of goods and/or services with respect to the image, and transmitting of the high resolution digital image file.

US 20040139036 A1 12 G06F-017/60

Abstract (Basic): US 20040139036 A1

NOVELTY - The method involves determining a processing schedule of available equipment and personnel for processing mail articles during a processing period. The processing of mail articles are simulated using the processing schedule that is determined for the arrival data which is projected to evaluate processing performance. Any changes for the processing schedule is determined based upon the simulating step.

DETAILED DESCRIPTION - An arrival data for mail articles is projected during a processing period. An INDEPENDENT CLAIM is also included for a system of scheduling the processing of mail.

USE - Used for scheduling processing of nominal mail (claimed) e.g. mail sorting in a postal service.

ADVANTAGE - The method determines the changes for processing schedule based upon the simulated processed mail articles, thereby improving the service level commitment or simply enhancing processing efficiency. The method easily schedules the mail processing and reduces the need for both equipment maintenance and skilled operators to run the equipment.

DESCRIPTION OF DRAWING(S) - The drawing shows a flow diagram of a nominal mail sorting process.

Abstract (Basic): US 20030167469 A1

NOVELTY - An image corresponding to the live event in a television program, is displayed for sale along with an invitation for the purchase of image in user's interactive television display.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(1) broadcasting method;

(2) system for purchase of images; and

(3) computer program code for displaying image for sales.

USE - For displaying images of live event such as sporting event e.g. football match in interactive television.

ADVANTAGE - Enables real-time sale of images generating revenue for the television company. Enables people to enjoy the events without actually attending the event.

DESCRIPTION OF DRAWING(S) - The figure shows a schematic block diagram explaining the image display method.

Abstract (Basic): US 20030139972 A1

NOVELTY - The merchandise system (10) provides extensive offerings of merchandise from merchandise providers. The service manager (12) includes a directory for providing information describing the business relationships between business entities associated with each order terminal (4) and providers (60), based on which offerings are displayed.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(1) merchandise ordering facilitating system; and

(2) computer storage product for merchandise ordering facilitating program.

USE - For allowing individuals to order merchandise such as clothing, furniture, tools and sports equipment over communication network.

ADVANTAGE - Catalog counters easily provide the latest information and process on merchandise from a variety of providers, while maintaining trustworthy relationship with their customers.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of the merchandise ordering facilitating system.

NOVELTY - An information with respect to business relationships between photo service providers and several business entities, is maintained. An offer is provided at one or more order terminals based on the business relationships associated with the order terminals.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (1) digital photo service ordering facilitating system; and
- (2) computer program for ordering digital photo services over communication network.

USE - For ordering digital images or image products over communication network.

ADVANTAGE - Enables encouraging photo service providers to establish various types of business relationships with business entities. Enables a customer to choose from wide range of photo products offered by numerous service providers. Enables a business entity associated with particular customer to ensure that preference is given to service providers with which they have established a preferred business relationship.

DESCRIPTION OF DRAWING(S) - The figure shows the digital photo service ordering system.

Abstract (Basic): US 20030038882 A1

NOVELTY - The information with respect to business relationship between several digital storage device provider and business entities, is maintained. A digital storage device is provided at one of several order terminals. An offering is provided at an order terminal, based on business relationship between the business entity associated with the order terminal and the digital device provider associated with the storage device.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (1) digital photo services ordering system; and
- (2) digital photo services ordering program.

USE - For ordering digital photo services over a communication network.

ADVANTAGE - Allows individuals and/or business person to order

goods and/or services over a communication network from different provider. Enables service requester to quickly retrieve different photo service providers without being restricted to a single brand or type provider. Allows a member service provider to offer their customers the goods and/or service of other member providers with which they have established a co-operative business relationship, while blocking access to member providers having a hostile relationship with that individual service provider.

DESCRIPTION OF DRAWING(S) - The figure shows generalized diagram of digital photo services ordering system.

Abstract (Basic): US 20030038881 A1

NOVELTY - The information with respect to business relationships between photo service providers and several business entities, is maintained. An offering is provided at an order terminal based on the business relationship associated with the digital storage device.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (1) digital photo services ordering system; and
- (2) digital photo services ordering program.

USE - For ordering digital photo services over communication network.

ADVANTAGE - Provides extensive offerings of image products and services from several different photographic service providers. Allows an individual service provider to concentrate on providing the goods and/or services for which they have core competencies. Permits the providers to offer services to a potential broader range of customers. Enables various members to easily exchange or provide information to other members and/or users, by using standards and protocols followed by the members for transmission of images and orders over communication network.

DESCRIPTION OF DRAWING(S) - The figure shows the generalized digital photo services ordering system.

Abstract (Basic): WO 200237370 A1

NOVELTY - Apparatus transfers funds between sellers or buyers electronically, authenticates the parties by proprietary 5 second online decision, handles exceptions between them by chargeback item processing, reconciles the funds, interfaces with the customer web page, reports suspicious activity by any of the parties to the customer, determines and indicates shipment approval, and provides a risk-determined decision solution to the merchant clearing him to transact with the parties. Online messaging is by a message unit architecture and interfacing with the web page is by batch processing architecture.

DETAILED DESCRIPTION - There is an INDEPENDENT CLAIM for a method of providing a decision solution for a customer

USE - Apparatus is for providing an integrated decision solution for merchants accepting Internet transactions with electronic payment processing e.g. credit card gateways.

ADVANTAGE - Apparatus provides for electronic transfer of funds, authentication of parties, exception handling, funds reconciliation, seamless integration with the merchant web page, reporting of suspicious activity, approval for shipment of goods and services and a decision for the merchant to transact with the buyer based on the risk determined for the buyer.

DESCRIPTION OF DRAWING(S) - The figure shows an Internet transaction decision apparatus.

Abstract (Basic): EP 1139256 A1

NOVELTY - A low resolution digital image is uploaded over the Internet to the sever. The image is manipulated to show the user previews of the goods that can be purchased then a high resolution image is uploaded to make the final product. The low resolution image can be no greater than 200 by 150 pixels and the high resolution image can be no smaller than 780 by 560 pixels.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is made for a system for manipulating and ordering goods featuring images over The Internet.

USE - For Internet sites where goods such as gifts, image imprinted articles and enlargements based on digital images are sold.

ADVANTAGE - Goods are able to be ordered without having to wait for a high resolution image file to be uploaded to the server.

DESCRIPTION OF DRAWING(S) - The drawing is a schematic diagram of the system.

JP 2003244387	A		20 H04N-001/00	

Abstract (Basic): JP 2003244387 A

NOVELTY - Clients' memories store printing **image** information with **higher resolution** and identification information for identifying the predetermined printing information. **Compressed printing images** are **transmitted** to server (2) which **transmits** printing control information to the printers connected with clients (3-1 - 3-n). The stored **image** information **edited** based on control information, is printed.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (1) client;
- (2) image information management method; and
- (3) image information management program.

USE - For **editing** information such as poster using image processing server.

ADVANTAGE - Provides user with the **edited** image easily and efficiently by simple operation.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of the image processing system. (Drawing includes non-English language text).

AU 2002245439 A1 G09G-001/06 Based on patent WO 200282415

Abstract (Basic): WO 200282415 A1

NOVELTY - A method of managing electronic **images** comprising the steps of **compressing**, storing and **transferring** as streaming data at least a portion of a **high resolution** digital master **image** file from the first location to a second location that comprises a workstation.

DETAILED DESCRIPTION - At the second location the file is decompressed and at least one image modification is performed on at least a portion of the image file and saving instructions representing the image modifications as a supplemental script file. One or more of the script files are adapted to convert the image file from one color space to another color space, to apply edge definition, to perform pixel level **editing** and to alter one or more colors on at least a portion of the **high resolution** digital master **image** file.

AN INDEPENDENT CLAIM is also included for an electronic image management system.

USE - Electronic image management system for storage and transmission of **high resolution images** through a communication network such as the Internet for business applications including advertising, desk top publishing, news print applications, corporate reports and printing etc.

ADVANTAGE - Minimizes the transmission resource requirements of the high resolution digital master **image** files across a communications system/network. Additionally, multiple versions of these **image** files can be stored and **transmitted** to locations as script files thus conserving disk storage space and providing the benefit of only requiring a single **copy** of the **high resolution** digital master **image** files to be **sent**. Also **compression** and decompression of the **image** files can be implemented before application of the scripts.

Designated States (Regional): AL AT BE CH CY DE DK ES FI FR GB GR IE IT
LI LT LU LV MC MK NL PT RO SE SI TR

Abstract (Basic): US 20020073221 A1

NOVELTY - Fractions of a video sequence **edited** with high resolution are exported to an external file. A collection of external files are compiled from an **image** management and treatment program and are submitted to a processing cycle using a video component **compressor**. A filter combination is applied to the external files to set parameters for color and sounds in a homogeneous sequence. The **compressed** combination of external files are complemented with instructions for control and execution in a server.

USE - For transmission and visualization of multimedia streams such as audio and video streams in computer network such as local area network (LAN), wide area network (WAN) and Internet in the field of advertising, product sales, virtual cities or community purposes in real-time.

ADVANTAGE - Does not require any plug-in programs to be **downloaded** for proper viewing of the Internet sites presenting audio and video stream transmissions, therefore provides better data **transference** in real-time of the images that is destined to generate virtual worlds in network.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of a computer implementing the multimedia stream transmission and visualization method.

Abstract (Basic): KR 2002003699 A

NOVELTY - A method for manufacturing a printed matter using a computer communication network is provided to manufacture a printed matter rapidly and economically by **transmitting** image data for manufacturing a printed matter using a computer communication network.

DETAILED DESCRIPTION - If a printed matter manufacturing request is existed from a client who wishes to manufacture a printed matter(S310), an **editing** system requests image data for an **editing** to a data supplying server(S320). The data supplying server receiving a data **transmitting** request for an **editing** **transmits** **low resolution image** data for an **editing** to the **editing** system(S330). The **editing** system **edits** a printed matter using the received **low resolution image** data(S340). If an **editing** of the printed matter is completed, the **editing** system **transmits** the printed matter **edited** using the **low resolution image** data to an output system(S350). A transmission of **high resolution** data for an output is requested to the data supplying server(S360). The data supplying server **transmits** the requested **high resolution image** data to the output system directly not through the **editing** system(S370). The output system completes an output data by inserting the **high resolution image** data into an **edited** printed matter data received from the **editing** system(S380), and outputs the completed output data(S390).

Abstract (Basic): EP 1139256 A1

NOVELTY - A low resolution digital **image** is **uploaded** over the Internet to the sever. The **image** is **manipulated** to show the user previews of the goods that can be purchased then a **high resolution image** is **uploaded** to make the final product. The **low resolution image** can be no greater than 200 by **150 pixels** and the **high resolution image** can be no smaller than 780 by 560 pixels.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is made for a system for **manipulating** and ordering goods featuring images over The Internet.

USE - For Internet sites where goods such as gifts, image imprinted articles and enlargements based on digital images are sold.

ADVANTAGE - Goods are able to be ordered without having to wait for a high resolution **image** file to be **uploaded** to the server.

DESCRIPTION OF DRAWING(S) - The drawing is a schematic diagram of the system.

Abstract (Basic): EP 475601 A

The DTP system (100) includes a general purpose computer system (200) and a full colour high resolution graphics system (300). A colour laser copier (150) provides the peripheral unit. Other peripherals can be a scanner (152) and a printer (154) with a workscreen display (140) and user inputs such as digitiser (110) and keyboard (112).

The system generates graphics **images** in bands across a page **image** with the **images** stored in DRAM (420). These are as **compressed images** using ADCT **compression** and the **JPEG** standard.

ADVANTAGE - Provides greater versatility for creation and **editing**

ABSTRACT

PROBLEM TO BE SOLVED: To downsize the file of a document without lowering access performance to an original document file in a document processing system for processing the document.

SOLUTION: A generating-side client terminal 30 **transmits** the whole original document to a server device 70. An object **compression** part 74 in the server device 70 converts a **high resolution picture** included in the received original document to a **low resolution picture**. An object substitution part 76 generates a substituted document of a small data quantity by using the **low resolution picture** and **transmits** it to the terminal 30 via a substituted document output part 78. A database 80 stores the entire original document in reference to the **low resolution picture**. The terminal 30 receives the substituted document from the server device 70 by a substituted document receiving part 36 to display-output a document **picture** and when printing and **editing** are performed, the terminal 30 reads the original document from the database 80 in the server device 70 and use it.

INTERNATIONAL PATENT CLASS (V7): **G06F-017/60**

...SPECIFICATION repository.

The preferred method of operation described in this invention for the direct purchase of **high - resolution images** by an **image** buyer from a specific image publisher comprises: accessing by the buyer the system service unit...

...access to the low-resolution image file as well as to selected parts of the **high - resolution image** file. The buyer has now the opportunity to verify, **enhance** and embed in a page layout, the **low - resolution image** of each selected thumbnail, quality check selected parts of each respective **high - resolution image** file and create simulations. Upon satisfactory termination of the enhancement and quality checks the buyer can purchase the **high - resolution image** , by negotiating directly with the image supplier the terms of purchase and mode of payment...

...of the system's service unit, which can split the payment between eligible parties. The **high - resolution image** file is consequently transferred from the supplier's repository to the buyer, by means of network downloading, physical transfer of a removable storage media or a

transparency. The **high - resolution image** file is automatically rendered by the enhancement unit to be ready for print, based on...

INTERNATIONAL PATENT CLASS (V7): **G06F-017/60**

...ABSTRACT method and system for ordering digital image goods and/or
services with respect to an **image** provided as a **low resolution**
digital file and a **low resolution** digital **image** file. The method
includes transmitting the **low resolution** digital **image** file to a
server at a remote **image** service provider over a communication network,
manipulating the **image** and/or ordering of goods and/or services with
respect to the image, and transmitting of the **high resolution** digital
image file.

...SPECIFICATION by 256 pixels, or be equal to or less than about one tenth
of a **high** resolution digital **image** file. Generally, the **low**
resolution image file need only have a sufficient size for allowing
image analysis and/or **manipulation** so that instructions can be
obtained for use with the **high** resolution digital **image** file. The
low resolution image files are stored on image storage device 27 and

associated with an identification ID for the user or the computer device 10. These generation of the **low resolution image** records can be performed using common image processing techniques such as image convolution and subsampling. The generation of the **low resolution** versions of the **image** files can be performed either by software available on the computer device 12 or using...

...an interest in the goods or services the service provider then initiates the transfer of **low resolution image** records.

At about the same time as the transfer of the low resolution image files...method according to the present invention. The first step 30 is that one or more **high resolution images** are obtained. These image may of course be obtained from any appropriate source. The next...

...generated, or may be generated at step 36 at the time of transmitting of the **low resolution image** files. The next step 38 is that the customer **manipulates** the digital **image** files as desired and/or as is allowed by the software at the service provider...

...step 40 is placed with the network photoservice provider 14. Then at step 42 the **high resolution** digital **image** files are transmitted to the server 34. At this time the customer is free to...

...SPECIFICATION graphic image must be sacrificed.

Frequently, however, it is not necessary to view the whole **image** at **high resolution**. Typically, a visitor to the Web site is content to view the complete **image** at relatively **low - resolution** providing that it is possible to select sections thereof for viewing at the highest resolution...

...Kodak company. When a user accesses the Web site, various vignettes are displayed as miniature **low - resolution images**. Clicking on one of the images with the mouse, results in the selected image being...

...as a TV screen having control buttons for allowing zooming and shifting as well as **image** cropping.

Zooming is achieved by clicking on the **zoom** button, whereupon the **image** is magnified by a predetermined factor, typically x2. In order to magnify the image more...decompression software from the Web server to the client.

Preferably, a portion of the displayed **low - resolution image** can be selected with a pointing device, such as a computer mouse, so as to define a **zoom** ratio. This is preferable to magnifying the **image** by a predetermined **zoom** ratio since it allows any desired fraction of the displayed **image** to be zoomed in a single action. In order to avoid the feeling that the system has "hung", the selected portion of the **low - resolution image** at the client may be immediately displayed whilst the server extracts the corresponding **high - resolution image** which may take several seconds. Then when the selected portion of the **high - resolution image** has been extracted, it is downloaded to the client and replaces the **low - resolution image** already displayed.

According to a further aspect of the invention, there is provided a system...

...the system comprising: a network server having a network memory for storing at least one **high - resolution** graphic **image** file of a reference image and a low-resolution graphic image file corresponding thereto, a...

...to the memory for displaying a low-resolution image at the client corresponding to the **low - resolution** graphic **image** file, a **zoom** control coupled to the memory for uniquely specifying a portion of the **low - resolution image** which is to be displayed at high-resolution, a client processor coupled to the memory...

...server, a network processor responsive to the size data for extracting said portion of the **high - resolution** graphic **image** file from the network server and downloading via the communication line to the client for...

...area of said display device, and an image processor for conforming the portion of the **high - resolution** graphic **image** to a display area of the display device.

The selected portion is typically selected arbitrarily...

Conference Sponsor: Soc. Comput. Appl. Radiol

Conference Date: 3-6 June 2000 Conference Location: Philadelphia, PA, USA

Language: English Document Type: Conference Paper (PA); Journal Paper (JP)

Treatment: Practical (P)

Abstract: Quantitatively analyzes the impact of wavelet **compression** on radioisotope **image** quality. The modulation **transfer** function (MTF) is the **transfer** characteristic that describes the **resolution** properties of an imaging system or process. If the MTF for a certain image procedure is known, the input image can be approximated from the output. A restoration filter based on the inverse MTF was applied on the wavelet- **compressed images** to restore the **resolution** and to **enhance** the signal-to-noise ratio (SNR). (0 Refs)

Abstract: The MPEG-4 visual standard is developed to provide users a new
level of interaction with visual contents. It is the first international
standard allowing for **transmitting** arbitrarily shaped video objects and
provides technologies to view, access and **manipulate** objects rather than
pixels. MPEG-4 scalability features enable the content providers to
transmit the same content through channels with variable bandwidths. In
this paper, we propose a new coding technique employing quadtree-based
decomposition to obtain a shape representation at different **resolution**
levels. Fewer bits coding the shape can be **sent** on a bandwidth-limited
channel while sacrificing the **resolution**. This is convenient for browsing
applications or viewing a high- **resolution** **image** on a **lower -**
resolution display device. The proposed scheme can improve coding
efficiency, and get a good tradeoff between bit-rate and distortion. The
method is shown to be simple, efficient solution and suitable for hardware
implementation. (13 Refs)

Abstract: A crosshole experiment was carried out in a layered sedimentary environment in which a normal fault is known to cut through the section. Initial traveltimes inversions produced stable but **low - resolution images** from which the fault could be only vaguely inferred. To image the fault, wavefield inversion was used to produce a velocity model consistent with the detailed phase and amplitude of the data at a number of frequencies. Their wavefield inversion scheme uses a classical, descent-type algorithm for decreasing the data misfit by iteratively computing the gradient of this misfit by repeated forward and backward propagations. Their propagator is a full-wave equation, frequency-domain, acoustic, finite-difference method. The use of the frequency-space domain yields computational advantages for multisource data and allows an easy incorporation of viscous effects. By running wavefield inversion on the field data, a quantitative velocity image was produced that yielded a significantly improved image of the fault (when compared with the original traveltimes inversions). Because the original field data were noisy and contained a high degree of multiple scattering (from the layering of the sediments), the **transmitted** arrivals were selectively windowed to **enhance** the image. The sediments at the site were strongly attenuating; they therefore used a viscoacoustic model during the modeling and the inversion that correctly simulated the observed decrease in amplitude with increasing frequency and source-receiver offset. (50 Refs)

Conference Date: 23-25 Feb. 1997 Conference Location: Newport Beach, CA, USA

Language: English Document Type: Conference Paper (PA); Journal Paper (JP)

Treatment: Practical (P)

Abstract: The study attempts to assess the feasibility and application of an algorithm combining noise-reduction and lossy **compression** to electronic portal **images** in radiation therapy. The basis of the algorithm is universal hard-thresholding in the wavelet-domain. The approach for the assessment is two-fold: an observer study using an image of a contrast-**resolution** phantom with different levels of compression, a quantitative study using control phantom to determine contrast-to-noise (CNRs) and relative modulation **transfer** functions (RTMFs). All results are analyzed as a function of a quality factor which is linked to the universal threshold level and expresses the lossiness of the compression. Results show that there exists an optimal quality factor for which the noise-reduction is maximal. The contrast **resolution** study indicates that the noise reduction is relevant for the observer. Furthermore it is possible to determine the optimal level from the behavior of the CNR as a function of all quality factor in regions with essentially no contrast. (11 Refs)

Abstract: The Civil Air Patrol (CAP) performs aerial reconnaissance of roadways and bridges. To **enhance** the analysis of aerial observations, CAP has proposed broadcasting amateur television from aircraft cockpits to ground receiving stations. However, because of the large bandwidth required for video transmission and the low **transmitter** power available the range of video transmission is very limited. As an alternative to amateur television transmission, the paper develops a software based, continuous-tone, still image transmission system. A digitized color image at television **resolution** contains nearly one million bytes. Digital imaging is, therefore, not often implemented due to high storage or transmission costs. However, by employing a high quality **image compression** technique, **images** may be **compressed** from 1/10 to greater than 1/50 their uncompressed size without visibly affecting **image** quality. These **compressed images** can then be **transmitted** over a low bandwidth channel in a reasonable time. The major issues in developing the prototype system were the **image compression** and data transmission techniques. The selected **image compression** technique is based on the **JPEG Still Image Data Compression** Standard, known officially as ISO DIS 10918-1 or CCITT Recommendation T.81. The system's data link will use high speed (9600 bits per second) packet radio (CCITT X25). This system shows the **JPEG image compression** method is suitable for **transmitting** high quality **compressed images** over a low bandwidth channel in a reasonable time. Additional data compression is achieved through the use of V.42 bis data compression. (13 Refs)

Abstract: The computers' emerging ability to **manipulate** and display images and video increases their information-handling potential by orders of magnitude. As the computer's utility as an information source grows, it opens a host of applications opportunities in communications, education, and image archiving. The key that unlocks the potential of computer-based

video is **image compression**. A single VGA- **resolution** 640*480-pixel image in full natural color (eight bits each for red, green, and blue color components) needs nearly 1 Mbyte of memory. An SVGA- **resolution** image requires 2.3 Mbytes-more than will fit on a floppy disk. With moving images, data rate as well as data volume becomes a concern. **Transmitting** studio-quality television (720*485 pixels at 30 images/sec) would require a data- **transfer** rate of 31 Mbytes/sec (251 Mbps)-far greater than data rates available on typical PCs. Abstract: Describes what image management is and is not, and discusses some of the issues involved in assessing an image management system. To start, the author takes the phrase apart and sees what is meant by the words image and management. Images include: real world pictures, business/presentation graphics, and document images. Management includes: capture, display, **edit**, integration with text, indexing, storage, retrieval, compression transmission, customizable forms and producing hard **copy**. The author contrasts image management with image processing and picks up on **resolution** and **compression** consideration important in **image** management. Finally he takes a look at trends. Abstract: GE Turbine Business Operations (GE-TBO) has introduced the Automated Document Storage and Retrieval System (ADSRS) which is a system that supports the on-line viewing, printing and revision of engineering drawings and their supporting documents. During system operation, original drawings and text documents in the form of 35 mm microfilm aperture cards, are scanned and transformed into digitally-encoded image data. After an image quality control review, the digital **images** are **compressed** and recorded on laser optical disks. The stored images are maintained on-line by automatic disk-changing and playing machines that can hold many disks at a time. Once stored on a disk, any image can be rapidly retrieved for viewing or **editing** on special graphic workstations, or they can be printed out, full-size, on high- **resolution** plotters. The system configuration is described. The image **transfer** control is described. Finally human and organizational issues in the operation of the system are discussed. (0 Refs)

Abstract: A method for acquisition, processing and analysis of digital, satellite-derived SST fields on a research vessel at sea in near-real-time (within 10 h of the satellite pass) is discussed. Such imagery provides a general view of the SST field over a large area (700*900 km) centered on a 128*128 pixel, full- **resolution** view of the study area. The ability to **send** these images to the research vessel in a reasonable amount of time (about 1 h using ATS-3) was a result of a three-level approach to data compression. To perform data **compression**, first, the overall **image** was decimated by 2 while the central 128*128 pixel portion was retained in full **resolution**. Second, a 1-bit-deep cloud mask was derived from the image. Third, the remaining SST values were encoded as SST steps from the previous pixel on a given scan line. Overall, the data were reduced by 75%-80%. An error-correcting protocol, KERMIT, was used to establish low error rate data communications through the ATS-3 VHF links. A moderate capability digital display unit facilitates display and **manipulation** of the resultant imagery. (5 Refs)

Abstract: The Lister Hill National Center for Biomedical Communications, the National Library of Medicine's research division, is currently engaged in studying the application of electronic document storage and retrieval (EDSR) systems to a library environment. To accomplish this, an EDSR prototype has been built and is currently in use as a laboratory test-bed. The system consists of CCD scanners for document digitization, high **resolution** CRT document displays, hardcopy output devices, and optical

and magnetic disk storage devices, all under the control of a PDP-11/44 computer. Prior to storage and transmission, the captured document images undergo processing operations that **enhance** their quality, eliminate degradations and remove redundancy. It is postulated that a 'pre-processing' stage that removes extraneous material from the raw image data could improve the performance of the processing operations. The processing operation selected to prove this hypothesis is **image compression**, an important feature to economically extend on-line image storage capacity and increase image **transfer** speed in the EDSR system. Computer Vision shares its interest in investigating animate behaviour and biological processes with other disciplines within the field of artificial intelligence (AI). Our research focuses on two aspects of biological vision and applies the knowledge gleaned from nature to appropriate computer vision situations. Both variable **resolution image compression** and spatially variant **image** data prioritization are present within animate visual systems and these concepts can be effectively **transferred** to **enhance** several computer applications.

In the area of digital **image compression**, new techniques are required to overcome significant storage and transmission problems in computer vision. A strong understanding of image characteristics enhances the effectiveness of **compression** and many other **image** processing operations. Traditional methods have maintained a constant **resolution** throughout an image. However, a survey of the various visual systems present in the animal kingdom demonstrates the potential of Variable **Resolution** (VR) compression methods. The author models several animate visual systems and outlines novel **image compression** techniques based on foveated vision. Interesting variations on the simple fovea are proposed, motivated by similar variations present in animate visual

systems--specifically multiple, dynamic and weighted foveae, and visual streaks. Techniques for efficient modelling of fovea movement are also described.

The other topic discussed is the prioritization of image data. A fundamental drawback to increasingly popular ATM-based switching is the possibility of information loss with congestion. We demonstrate that with intelligent, fovea driven priority assignment of image data, we can reduce the negative impact of information loss over ATM networks. ATM standards allow a single bit to indicate high or low packet priority. To reduce the effect of this restriction we introduce the concept of priority dithering. Network multimedia multicast scenarios over heterogeneous link capacities where foveal prioritization would be of benefit are described. Included are network simulation results of this method, which demonstrate the advantages of priority dithered foveal prioritization over traditional methods.

Utilizing our knowledge of biological vision systems provide us with insights into new developments in the areas of **image compression**, **image** transmission, videophones, multimedia, teleconferencing, and telepresence. Original, substantive research is presented.

In this thesis a new orthogonal transformation called MHDCT (Modified Hadamard-structured Discrete Cosine Transform) is proposed. The proposed transformation combines the salient features of the Hadamard transform and the discrete cosine transform to obtain a good complexity-performance tradeoff. The complexity of the transformation is less than the complexity of the DCT, but it provides a performance quite close to that of DCT. A fast algorithm is proposed for MHDCT implementation. Using the proposed fast algorithm, the complexity of the transformation has been evaluated and compared with that of the DCT. Different comparison measures have been used to compare the performance of the MHDCT with that of the DCT for a one-dimensional Markov source.

Then, the MHDCT is extended to **compress** two-dimensional **image** signals. To **enhance** coding performance, the MHDCT is concatenated with wavelet transform (WT) to provide a two layer image coding system. As the outer code, the WT decomposes the **image** signals into uncorrelated **low resolution** and detailed signal and detailed signal components. As inner codes, the MHDCT adaptively encodes the low **resolution** and detailed signals.

The structure of the adaptive MHDCT and PCM has been used to progressively **transmit** each of the low **resolution** and detailed signals separately. A salient feature of the proposed progressive method is that no overhead information is necessary.

Finally a hybrid motion compensation transform coding method with

MHDCT is used to encode the video signals. The performance of the video coding system has been compared to the MPEG standard and it is shown that, although the MHDCT is a low complexity transformation, it provides a good performance for video coding.

Model-based nonlinear interpolation algorithms for both still-frame image **resolution** enhancement and digitally assisted deinterlacing for compatible EDTV broadcasting are presented. The former relies upon the use of local edge modeling, a topic for which new results have been obtained.

Linear interpolative techniques are incapable of restoring high frequency information which has been lost during subsampling, however, by utilizing a feature-based image source model it is possible to defeat the limitations imposed by sampling theory and predict a portion of an image's super-Nyquist frequency spectrum through an analysis of its lower frequency characteristics. In this thesis, emphasis is placed upon the sub-pixel localization of detected step-edge boundaries in the **low - resolution image** so as to maintain their visual integrity during the spatial **zoom**. A low-complexity edge-fitting operator designed for implementation over small window sizes has been developed for this application. Still-frame interpolation in this manner results in an image of increased **resolution** with noticeably sharper edges and, in all tried cases, lower mean-squared reconstruction error than produced by standard linear techniques.

Utilizing the rigid moving body assumption employed in block-motion estimation, a compatible EDTV broadcasting technique providing for the digitally assisted interpolation of the missing scan lines of interlaced image sequences is also developed considering requirements such as low receiver complexity, high **compression**, and good **image** quality. An auxiliary digital stream of compressed data, consisting of coded motion and reconstruction mode information, which could be **transmitted** within the existing blanking intervals of a standard interlaced broadcast, can be used to greatly improve the quality of received television images. Coding operations for the deinterlacing process are implemented on a block basis, over which a limited quad-tree segmentation is applied to **enhance** reconstruction quality where possible. Simulation results are also presented, demonstrating that compression of the block segmented motion and interpolation instructions in this manner enables high quality progressive image representation within the constrained transmission environment of the traditional interlaced broadcast.

Available from UMI in association with The British Library. Requires signed TDF.

This thesis is concerned with 2-level, feature extracted, electronically generated cartoons. It comprises part review, part analysis and part application and usage for low-bit-rate coding.

A set of psychological experiments designed to **enhance** our understanding of the theory underlying the generation of cartoons emphasised both the importance and advantages of valley/edge detection for the generation of such highly-recognizable sketches.

A novel real-time two-way digital signal processing-based videophone, capable of **transmitting** moving, cartoon-type images over a standard single telephone line is discussed. The compressed data are **transmitted** over the ordinary public switched telephone network via a commercially-available standard modem. The acceptability and usability of the system as a communication aid for the deaf was assessed subjectively with a number of profoundly deaf volunteers. The results obtained emphasise the need and importance of such a system as a communication aid for the deaf.

An original narrow band visual communication system capable of **transmitting** low- **resolution** (64 x 64 or 100 x 100) grey-level (and possibly colour) images is also discussed. The bandwidth reduction is attained by modelling the video signal with a two-component model. The first component is the cartoon sketch derived as before from the grey-level image by valley/edge detection. The second component is generated by using the cartoon as a sampling template to sample the grey-level image, so that samples of the original image are taken at the cartoon lines. Thus the **compression** of the **picture** data itself will arise through an approximation of the original image by interpolation between the sample points of the cartoon.

TV phone runs over PHS

JAPAN: NEW TV PHONE FROM KYOCERA

Telecom Sources (XED) Apr 1998 P.67

Language: ENGLISH

Kyocera Corp of Japan has released a new TV phone, VP-110, that uses PHS. The 300 gm phone uses 1.5 W of power and runs continuously for 30 minutes. The LCD can also be divided into half to feature both parties during a TV conference. The LCD panel can also be used as a viewfinder to shoot still colour **images**. The camera features a **low resolution** of 80,000 colour

elements CMOS sensor in a cylindrical camera head unit which is able to **rotate** to a maximum of 210 degrees. This facilitates the transmission of images. JPEG images are kept in an internal flash memory that can be **transmitted** over the POTS and PHS networks.

Kodak to Unveil New System To **Edit** and **Transmit** Images
US: IMPROVED IMAGE SYSTEM AT KODAK
Wall Street Journal Europe (WSJ) 30 May 1996 p.4
Language: ENGLISH

A new technology system that allows for a quicker electronic transmission of photographic images has been developed by Microsoft, a software firm, and the photographic firm Kodak, both from the US. Its named Nifty and it is able to work quicker because it **sends** the **picture** in a **low-resolution** form, which requires less memory, and only creates high-**resolution** versions at the other end. In the same way it is also able to allow the **manipulation** of images by computers to be done faster. The full details of the new technology are expected to be revealed soon.

DEVELOPMENTS IN NEWSPAPER PUBLISHING METHODS
EUROPE - DEVELOPMENTS IN NEWSPAPER PUBLISHING METHODS
Information World Review (IWR) 0 December 1990 p12
ISSN: 0950-9879

An experiment is being carried out to examine ways in which newspapers could be created in different locations throughout Europe. Experimental editorial offices are to be set up in Cambridge, UK, Paris, France, and possibly Berlin, Germany, by a group of newspaper technology experts from Mirror Group Newspapers and members of the EC project, DIMPE. These offices will test the attractiveness as well as the technical possibility for reporters, **editors** and sub-**editors** to access a remote image and text database. High-speed telecommunications will be used to move text, **low-resolution pictures**, layout and partially made-up sections of a newspaper across Europe for local text and picture **editors** to add to and

assemble. Newspapers can then be **sent** back to a central editorial facility for assembly into the complete publication, or alternatively **sent** direct to a printing works for the printer to assemble the newspaper from the various sources. ISDN will be a crucial factor in this project since it operates around 30 times faster than most data lines, and will allow more colour to be incorporated in newspapers. Article discusses the DIMPE project in some detail, as well as likely developments in newspaper publishing in Europe.

Conference Date: 23-26 May 2005 Conference Location: Kobe, Japan

Language: English Document Type: Conference Paper (PA)

Treatment: Practical (P)

Abstract: Wavelets are being used in a number of different applications such as **image enlargement** and **image compression**. In **order** to benefit both applications, we propose a method to estimate the high pass output from the low pass one. Using the predicted high pass output, we would be able to enlarge an image superior to other compared interpolation methods in many situations. Moreover, we utilize the predicted sub-band for a wavelet image coder. It is shown that by using this proposed method we can profit both **image enlargement** and its **compression**. (7 Refs)

Treatment: Practical (P)

Abstract: Mobile imaging helps realize "any time, anywhere" visual communication by allowing consumers to capture, review, share, and print pictures via mobile devices while "on the go". However, major technical challenges exist in bandwidth, power consumption, display and other areas. As a result, the limited resources available in mobile imaging need to be utilized in an intelligent and effective fashion. To this end, we propose to use emphasis image selection (EIS), which automatically selects the most important image, i.e., the one that should receive the most attention or special treatment, given a set of photographic images that typically belong to the same event. Images from a film **photofinishing** order or a digital camera memory card are first clustered into groups of related to different events based on metadata and image content. Emphasis images are selected to provide a summary of the group content and are sent to mobile devices for preview, sharing, browsing, and printing. Emphasis images also receive favorable treatment in **image** rendering, **compression** and transmission. Experimental results using consumer pictures are presented to demonstrate the efficacy of the proposed system. (14 Refs)

USGS unveils TerraServer, expands business partners

GIS World v. 11 no9 (Sept. 1998) p. 24

DOCUMENT TYPE: Feature Article ISSN: 0897-5507 LANGUAGE: English

RECORD STATUS: Corrected or revised record

ABSTRACT: TerraServer is a World Wide Web-based database containing over 4 terabytes of **compressed** aerial and satellite **images** that was launched by the U.S. Geological Survey, Reston, Virginia; Microsoft, Redmond, Washington; and Aerial Images, Raleigh, North Carolina. Users can download and view geographic images of near 1-meter resolutions using TerraServer. Digital files and high quality **prints** can be **ordered** from the TerraServer web site at <http://www.terraserver.microsoft.com/>.

Image-editing software

UK - REVIEW OF IMAGE-EDITING SOFTWARE

Computing (CNG) 14 January 1993 p23-24

UK: During the last two years, a range of image-editing packages that run on 386 and 486 PCs have become available, allowing users to carry out such operations as modifying images to enhance their visual appeal. A 2-page article looks at some of the PC image-editing packages available and at the functions they offer and discusses the use of such software by Mowlem (UK), engineering and construction group, the British Academy, national academy for the humanities and social sciences, and Peter Crowther, freelance illustrator. Applications for PC image-editing packages include converting an image from one file format to another, capturing photographic images from a scanner or other application and then modifying it, turning a colour image into black and white, producing colour negatives, making images look embossed and turning images into posters. The article describes some of the features of PC image-editing packages and discusses **image data compression** methods before giving details of Photoshop for PC or Mac from Adobe, Photostyler 1.1a for PC from Aldus, Image Assistant from Caere, Halo Desktop Image from Media Cybernetics, Picture Publisher 3.1 for PC from Micrografx and **PhotoFinish** 2.0 from WordStar.**

WORDSTAR, ZSOFT ENHANCE **PHOTOFINISH** WINDOWS EDITORUS - WORDSTAR, ZSOFT ENHANCE **PHOTOFINISH** WINDOWS EDITOR

Computergram International (CGI) 6 October 1992 p5

ISSN: 0268-716X

WordStar International and its ZSoft (Atlanta, GA) acquisition have announced the latest release of their Windows image editor, **PhotoFinish** 2.0. It features automated scanning and enhancing, free PhotoLibrary comprising 24-bit business images, Image Viewer file manager, simpler placement and editing functions, 14 new filters, **JPEG Compression**; calibration technology for colour adjustment and enhanced Help facilities. It costs USD1r200; or USD1r69 for **PhotoFinish** and CorelDraw 3.0 upgrades.*

COMPANY: WORDSTAR INTERNATIONAL; ZSOFT

PRODUCT: Word Processing Software (7372WP); Computer Software (COSW);
Document Image Management Software (7372DM);

EVENT: NEW PRODUCT EXTENSION (33);

ABSTRACT: A variety of photo-album services are available on the Internet, both from traditional **photofinishers** and Web-only startups. PictureVision has offered its PhotoNet service for a year and claims...

...Kodak's is centralized, while PictureNet is distributed and has a photo center at each **photofinisher**. PictureVision plans to roll out its own centralized archive in the fall of 1997.

TEXT:

...those photos of your summer vacation? Tell them to log on to the Web. Traditional **photofinishers** and digital startups are vying for new online revenue by letting anyone with a camera...
... service is digitizing tens of thousands of rolls of film per month, via 8,000 **photofinishing** retail outlets, for posting on the Web where consumers can order reprints and other merchandise...

...1998. Even as Kodak and PhotoNet gear up for the next phase of their online **photofinishing** services, Pictra plans to hook up with film developers to provide similar access to reprints...

...digital camera users will be able to mix their images with high-res scans from **photofinishers**. Through an agreement with Adobe Systems, expect access to PictraNet from within future image-editing...

...100 pictures plus a penny per picture thereafter, and you'll need to go to **photofinishers** that use Kodak Premium Processing. Initially, you'll return to the original retailer to pick up your **prints**, but mail-order delivery is on the horizon.

Meanwhile, PhotoNet is a distributed system wherein each **photofinisher** maintains its own virtual online photocenter. Participants so far include Konica, Wolf's Camera and...

...mail-order vendor Mystic Color Lab. Currently, pictures remain online for just 30 days, and **photofinishers** fulfill your order for pickup or mail-order delivery.

But PictureVision plans to roll out...

...build their own albums regardless of who scanned them. Nevertheless, since relatives might use different **photofinishers**, the fulfillment process still needs to be worked out.

"The original **photofinisher** will always participate in the revenue opportunities," says PhotoNet spokesperson Dan Schiappa. "But that may..."

...picture "slots," just like Kodak. PhotoNet is working on co-branded "club" services with specific **photofinishers** and camera vendors that will offer similar features minus the long-term storage option.

Like...

...ll ultimately interact with photos online. FlashPix stores image data in multiple resolutions, speeding up **editing** by letting programs such as **Picture** It work with ...magazines up close without losing detail.

A future version of IIP will enable users to **download** small, low-**res images** and apply their **edits** across the Net to the larger, **high - res images** used by the **photofinishers** for printing. But while this will accommodate global changes such as color saturation, cropping, and...
...s end.

In the end, the litmus test will be technology, not choice. Right now, **photofinishers** still require that you **buy** a set of **prints** before using online **photofinishing** services. To become must-haves, the services need to give users the option of **buying** only the **prints** they want.

"A lot of this comes down to whether **photofinishers** will walk away from today's guaranteed revenue," says Paul D'Andrea, PhotoNet's senior...

... cameras and their higher resolutions can also produce truly
filmlike prints (either through an online **photofinishing** service or with
a good ink-jet printer and glossy paper). More pixels mean you...

...larger images, such as 5-by-7- inch enlargements, with little or no loss
of **picture** quality. Likewise, the **high - resolution , 2- megapixel**
cameras also tend to have the best light and color sensitivities. This
translates into pictures...

...image quality. The Fujifilm MX-2700, the Nikon Coolpix 950, and the
Olympus C-2000 **Zoom** take arguably the most refined pictures in this
group. Sony's and Kodak's cameras...

...color, making the Sony Cyber-shot DSC-F55 and the Kodak DC265 (despite
its slightly **lower resolution**) worthy competitors.

Image Trade-offs But more pixels aren't always better. If your
digital images are likely...

...and print work.

Pixels paint only part of the picture, though. A camera's optical
zoom lens can have a dramatic impact on your pictures, effectively letting
you step closer to...

...optical zooms in inexpensive shooters like the Toshiba PDR-M3 and the
Canon PowerShot A5 **Zoom** . (Digital **zoom** , by contrast, magnifies part of
an image by magnifying the pixels, so you lose resolution. This is not
considered true **zoom** .)

Some digital camera features-including an optical viewfinder, color
LCD screen, multimode flash, and computer...

...cameras come with either 8MB or 16MB of memory-befitting the larger file
sizes their **high - res pictures** demand- usually on removable
CompactFlash or SmartMedia cards (though Sony uses its own Memory Stick...

...memory. You'll also want to look for a speedy USB port for easy file
transfers to a PC; the Fujifilm, Kodak, Ricoh, and Toshiba semipro models
are the only ones...

...roundup to sport one. A few cameras also offer IrDA (infrared) ports for
cable- free **transfer** . Meanwhile, personal cameras like Canon's compact
PowerShot A5 **Zoom** are more likely to fit in your pocket, though a growing
number of semipro models...

...and sensitivity (gain). A programmable manual mode lets you group

settings.

Creeping In: An optical **zoom** lens lets you frame your subject tightly, increasing detail and eliminating unwanted background. Optional lenses...RDC-5000 has you covered.

Fast Moves: A USB port makes quick work of file **transfers**.

High Resolution: 2.2-megapixel resolution means your photos will look immaculate when you print...

...to spend megadollars on megapixels. But you still need accurate, clean images and tools to **edit** them, which is why Canon's PowerShot A5 **Zoom** is an ideal choice.

Edit the Scene: The Canon's excellent software tools let you **edit**, filter, and stitch shots.

Hold the Price: Even on a budget, you can now get perks like an optical **zoom** lens.

Hold the Pixels: XGA (or even VGA) resolution is more than adequate for onscreen...

ABSTRACT: Personal-imaging software lets PC owners **edit** and **manipulate** and **edit** photos that have been digitally stored. Digitization methods include scanners, digital cameras, CD-ROM options...

... are billed as "photo- realistic" because they use special ink cartridges and papers to produce **high - resolution** printouts.

While **photos** that are digitally developed and printed at home may not be up to the standards...

...been taken with conventional cameras to you on special CD-ROMs or floppy disks or **upload** your shots to sites on the World Wide Web. Users can **edit** the digital images and then **send** them back to **order** final **prints**

Technophobes, this hobby just might cure your fears forever. The process is surprisingly uncomplicated. You...

...in the fine-tuning that is possible. You can sharpen the focus on fuzzy photos, **crop** awkwardly shot pictures and erase scratches. For casual snapshooters, it's like a trip to...

...stretch and squish photos any which way you please. And losing 10 quick pounds before **sending** a photo of yourself to your alma mater's newsletter has never been easier.

Of...

...programs walk you through step by step, from opening up images you scan in or **download** from the Web to correcting flaws and adding creative flourishes. Once you've applied the finishing touches, you can save your **pictures** either in a **low - resolution** format to post on a personal home page or E-mail to a pal or...

...the image into your computer, where you can open it as a digital file and **edit** it with your chosen personal-imaging software package.

Should you go this route, it's...

...hobby might consider buying a digital camera. Storing pictures in memory, these gadgets let you **transfer** photos directly to your PC. All major camera companies, as well as computer manufacturers Apple...

...them developed on the Web. For \$2 to \$5 per 24-exposure roll, you can **send** your pictures via mail to PhotoNet (<http://www.photonet.com>), an online network of camera stores; they will be developed, scanned in and **uploaded** to a password-protected Web site. You will be notified via E-mail when they...

...in 24 hours). Within 30 days, you can decide which images you'd like to **download** and touch up using your own software. When you're finished, you

can **upload** the **edited** images to PhotoNet, along with **orders** for professional **prints** at a cost of \$6 to \$10 per 24 prints.

Or you can print your...to \$1.50 per printed image. And crafts materials such as T-shirt iron-on **transfers** and fabric sheets run in that range, too. Of course, you don't have to...

...get pictures back instantly. And maybe after that, we'll see a product that stops **red - eye** before it happens.

Photo play. (guide to image editing) (includes related articles on file format choices, resolution, fun projects to do with digitized photos...

...ABSTRACT: into computer files either with an inexpensive scanner or through a service bureau. Professionally digitized **photos** are usually delivered **compressed** on a floppy disk; the user will need a lot of hard disk space to...

...format. PictureWeb offers a service that stores digitized photos on the World Wide Web. Many **photofinishers** digitize images to Kodak Photo CD format, which offers very **high resolution** and color accuracy. **Photo** CD images can take up a lot of RAM, and the cost tends to be...

...Digital cameras let users create digital images directly, often for less than \$1,000. Image- **editing** software is a necessity; good products for hobbyists include Adobe's PhotoDeluxe and PictureWorks' PhotoEnhancer...

... getting shutterbugs addicted to their computers. Using a variety of these products, we scanned, printed, **downloaded** , and **edited** our own photos and found that many of the products were affordable, easy to use...

...market. Once your photos have been digitized, you can then use a range of image- **editing** programs to turn your Mac into a virtual darkroom.

The programs we tested let you...

...variety of alterations, from salvaging underexposed or poorly composed photos to going as far as **editing** out an ex-spouse whom you might want, so to speak, out of the picture. **Edited** photos can then be dropped into specialized project software and used for personalizing a variety...

...relatively anemic Macs (68030-based or less powerful ones) won't have

the horsepower to **manipulate** photos at anything faster than a snail's pace. Graphics pros, who prize versatility and...

...an automated process. Some deliver the goods on floppies, others post the images online for **downloading**, and yet others burn them onto CDs.

Floppy Photos. Need a 24-exposure roll digitized? How does four bucks grab you -- for the whole roll? A few **photofinishing** companies now offer digitizing as an option with a regular developing and printing **order**. When you get your **prints** and negatives back, sometimes in as few as two days, the envelope also contains a...

...these large image files. In order to work with the photos on-screen, you must **copy** the files to your hard disk, decompress them, and convert them to a standard file...

...week. When time is of the essence, you can shave off a few days by **downloading** your pictures from Seattle FilmWorks' Web page (<http://www.filmworks.com>) at no extra charge. If you're using a 28.8-kbps modem, **download** time for a 24-exposure roll runs roughly six to eight minutes.

The image quality...

...Click on a thumbnail to see a larger version of a selected image, and then **download** it if you want that image.

Besting the photos-on-floppy digitizers, PictureWeb offers several choices of format (**JPEG**, **GIF**), **compression**, and resolution (choose custom resolutions of up to 800 x 640 pixels) for **downloading**. Also, its top resolution choice beats out those provided by Konica PictureShow and Seattle FilmWorks. The **download** time for an image with the highest resolution and least amount of compression is about two minutes if you're using a 28.8-kbps modem; **images** with **lower resolution** and greater compression take less time.

Remember, however, that because PictureWeb stores images for you, you have to **download** only those you need for a project. The rest, as well as the originals of any images you **download**, stay safely in PictureWeb's Web space. You pay \$24 to store up to 100...

...digitizing services, you'll find it in Kodak's Photo CD. Although many average storefront **photofinishers** offer Photo CD service, Photo CD **images** are of such **high resolution** that even graphics professionals use them in their work. Additionally, the images are permanently stored...

...one-day turnaround, cough up roughly twice that and be sure to go to a **photofinisher** who processes Photo CD discs on-site. (Processing of an individual print or slide costs...

...film.

Instead, images are stored in the camera's built-in memory and can be **transferred** to your computer via a cable that connects the camera to your computer's modem...

...due out at about the time this article appears. In our informal tests, the Casio **images**, which have relatively **low resolution**, appeared grainier than most. Despite its hefty price tag of \$979 (estimated street), we especially liked Kodak's new DC50 **Zoom** model, which comes with a **zoom** lens and offers expandable storage via PC Cards (see review, May '96, page 44).

Step...

...pictures may be under- or overexposed, suffer from poor composition, or

be plagued by the **red - eye** menace. Or heck, the photos may look fine artistically but you'd rather have Tyra Banks' or Jackie Chan's body instead of your own.

Fortunately, image- **editing** software gives you the means to **enhance** your digitized photos. Programs aimed at hobbyists sport low sticker prices as well as friendly...

...that are provided by Konica PictureShow and Seattle FilmWorks and that offer very rudimentary image- **editing** features.

Digital cameras usually come with more-substantial software. Apple PhotoFlash, which is bundled with...

...image you like the best, and the adjustment is complete.

Many of the budget image **editors**, including PhotoEnhancer Plus, let you make more-drastic changes. Others in this category are Microfrontier...

...s PhotoMaker, which is actually a limited version of ColorIt!. All sport a large image- **editing** area with a menu up top and a floating toolbox.

Another program, Adobe PhotoDeluxe, offers many of the features and tools common to image- **editing** programs, but its approach redefines simplicity. Instead of having an image area flanked by a...

...that of another, putting your head on the body of someone or something else, removing **red - eye**, and applying special-effects filters.

A variety of handy tools populates the average image- **editing** program's toolbox. Use the pencil tool to draw arrows pointing to a particular location...

...what your house would look like in a different color.

It's the specialized image- **editing** tools, however, that can be the most fun to use. Clone tools, for example, help...

...of filters designed to work with Photoshop, can be used with nearly all the image- **editing** programs mentioned in this article, excluding both versions of PhotoEnhancer.

Step 3: Make Arts into Crafts

Edited digital photographs are the raw material for a host of fun projects. Drop them into...

...the time or skill to design layouts? Check out specialized software. One of the image **editors** -- Adobe PhotoDeluxe -- doubles as a project generator. PhotoDeluxe not only guides you through enhancing an...

...specifically designed to incorporate photographs, but you can customize the terrific collection of templates and **enhance** them with PrintShop's ample supply of clip art.

If none of these programs has...less than ten minutes, you'll be printing your kid's best baby pictures to **send** to grandma. Maximum output size is 4 x 6 inches, and you have to use...

...media (36 prints apiece). An additional kit, also for \$40, includes materials that let you **transfer** photos to four coffee mugs -- it's as easy as printing an image, securing it...

...exclusive purview of graphics professionals. New services and products offer myriad ways to digitize and **manipulate** images, at prices well within the reach of most hobbyists. And there's certainly no...

...but you know that it took only one or two mouse clicks in your image- **editing** program. Just pick your favorite special-effects filter, and watch as your image goes from ho-hum (A) to artsy (B). Many image- **editing**

programs also accept third-party add-on filters, such as those provided in KPT Cool...

...online, GIF is a smart bet, because its relatively small file size allows images to **transmit** quickly over the Internet. This format is a poor choice for most other uses, however...

...of its very small file sizes, the JPEG format is another good choice for images **transferred** via modem or for those crammed onto a floppy disk. **JPEG** is actually a **compression** scheme that throws away data to save space -- called a "lossy" scheme -- so you'll...

...image degradation if you opt for a high level of compression. At lower levels of **compression**, however, **picture** quality remains accurate.

PICT

(not an acronym)

Files in this very common bitmapped format are compression scheme, which some programs may offer as an option. Unlike other types of **compression**, LZW maintains **image** quality through a so-called "lossless" scheme, which **compresses images** without throwing away any data.

Pixel Perfect: Focus in on resolution

Be you amateur or...

...be working with photos on your computer, you should understand the costs and effects of **resolution**. **Images** with **high resolution** show off sharp details but also take up more space on your hard disk than **low - resolution**, less visually exact **images**. They also usually cost more to digitize. In order to save yourself some time, money...

...mathematics, and you'll quickly see that even the lowest-resolution desktop scanners can provide **higher - resolution images** than most value-priced digitizing services or digital cameras -- as long as your

scanned print...

...your Mac may not have enough RAM to handle it. Even if it does, an **image** with a **higher resolution** than you need will cause your computer and printer to grind away needlessly, and you...

...looks best to your eye. You may find you can get away with a somewhat **lower - resolution image**, but increasing the resolution drastically isn't going to improve the image quality.

The bottom...

...resolution for the final, enlarged image. This is when you'll need to seek out **higher - resolution** options, because **images** from low-end digital cameras and photos-on-floppy providers will fail you.

Photo Fun...

...projects in under an hour apiece

You've digitized your favorite photos, rubbed out the **red - eye**, and fooled around with a slew of special effects. But where do you go from...

...coffee cups, and postcards--each in under an hour.

Project: Real-Estate Flyer

Tools: Image- **editing** software, Adobe PhotoDeluxe

Step 1: Digitize a photo ...Shown here is the image we used.)

Step 2: Open your file in an image- **editing** application such as PhotoEnhancer Plus, in which you can **crop** and touch up your image. We used the clone tool to paint over the antenna...

...output on a color inkjet printer.

Project: Calendar

Tools: The PrintShop Deluxe CD Ensemble, image- **editing** software (optional)

Step 1: If necessary, touch up your photo with an image- **editing** program. You might want to **crop** it, replace the background, or remove unwanted items.

Step 2: After launching PrintShop Deluxe, you...

...to highlight important dates. Then you're ready to print!

Project: Photo Mug

Tools: Image- **editing** software, Fargo FotoFun! printer, Fargo Mug Kit

Step 1: Use an image- **editing** application such as ColorIt! to touch up your original photo. In our example (left), we **cropped** and resized the image to fit on a mug. We then used the clone tool...

...ugly lamp in the background with Christmas-tree branches. We also fixed the children's **red - eye** problem by selecting the red pupils with the magic-wand tool and then pouring in...

...on the Fargo FotoFun! dye-sub printer, using the printer settings recommended for coffee-mug **transfers**.

Step 3: Secure your printout to a supplied coffee mug, using tape and the special...

...horse was unimpressive, especially with the red fence marring the composition. We saved an extra **copy** of the image.

Step 2: We selected PhotoDeluxe's Motion filter to distort the image

...

...to add the illusion of motion to the horse.

Step 3: We returned to the **copy** of the original photo and clicked on the Change Background icon. PhotoDeluxe then stepped us...

RECORD TYPE: FULLTEXT; ABSTRACT

WORD COUNT: 6074 LINE COUNT: .00466

...ABSTRACT: can be viewed on a TV set or on virtually any computer platform. PCD's **Image** Pac **compression** scheme is loses less data than other **image - compression** methods but also less efficient. Master PCD disks use special media produced by Kodak and...

...DOS and Windows has lagged behind hardware support. Users should be careful when choosing a **photofinisher** to **transfer** images to PCD because the technology is difficult to understand.

... chroma (C) channels. Just as with the separate luma color spaces used by other lossy **compression** schemes such as **JPEG**, YCC makes it possible to perform greater compression in the chroma channels--where you're...

...16, Base/4, and Base), plus luminance and chrominance residual information that's used to **enhance** the **higher - resolution images** created by interpolating up from the Base resolution. On a Pro PCD disk, the decimation...and it's in your best interest to save up your photos and have them **transferred** in one shot. In addition, your CD-ROM drive needs to understand how to search...

...information. As already mentioned, the Pro PCD uses the IPE area to store residuals for **higher - resolution images**, as does the PCD Medical format, which is intended to accommodate files in formats standard...

...that clip-image vendors can include on their CDs--for working with PCDs, mainstream image- **editing**, illustration, and desktop publishing packages can also work with PCD files and allow you to...scanners used to acquire images; Kodak's proprietary software for scanning, performing color space conversion, **image compression**, and **Image** Pac creation; CD-R writers for mastering the disks; and a variety of end-user applications for accessing and **manipulating** the images. While Kodak offers products in all of these categories, only a small fraction...

...398-5337; fax, 415-398-5339).

The largest installed base of PCD-creation sites are **photofinishers**. To have a disk created, you drop off your negatives, slides, and transparencies the same way you now get prints developed. (For a list of PCD-capable **photofinishers** in your region, contact Kodak at 800-235-6325, ext. 53.)

As we went to...

...of the recording software won't support interleaving.

Many factors affect the pricing of PCD **transfer** services, not the least of which is the market's current state of flux. We've found the cost of **transferring** a set of 35-mm negatives to a standard Master PCD is anywhere from \$0...

...to slides. So, for example, at \$1.59 per scan, using a Kodalux service for **transferring** 36 predeveloped exposures to a new PCD will cost about \$67.24; the same operation...

...roll can cost less than \$10. Because even the least expensive equivalent PCD processing--36 **transfers** to an existing disk--costs more than twice that, it's not surprising that consumers...quality scans than they can get from a \$1,200 400-dpi unit.

Pro PCD **transfers** tend to cost a lot more than standard Master ones. For instance, ZYZX charges \$20...

...part, this higher price reflects the higher cost of the scanner used for Pro PCD **transfers**; with the lower-resolution scanner for creating Master disks, all scanning and correction works automatically...

...squeeze on traditional service bureaus and probably on their prices as well.

BE DEMANDING

Eventually, **transfer** pricing should signal the potential quality of the final scans; in other words, higher-priced...

...imaging services, you might need to be a bit savvier than when dealing with a **photofinisher**. Don't treat PCD **transfers** the way you do film developing, and don't assume that all the flaws in...

...handling of your jobs, you're better off paying higher prices and working with a **photofinisher** used to dealing with professional

photographers, or one who has proved responsive to your needs...

...however, were either used to serving professional photographers or were personally recommended to us. Some **photofinishers** --especially those accustomed to **sending** jobs off to a third-party service such as Kodalux--tend to be poorly organized...
...for archiving old photographs. But if you don't have negatives, the only way to **transfer** the pictures is either by scanning them yourself (or having them scanned by a service...

...on a Print PCD--an unnecessarily expensive solution--or by having negatives made by a **photofinisher**, another expensive process that also degrades the quality of the image.

Of course, PCD's...leeway for speeding up the process of opening PCD files.

BE CAREFUL about which PCD **transfer** service you use: Some **photofinishers** tend to lack the necessary knowledge about PCD services. Go by personal recommendations if you...

...in which to play back images (called Favorite Picture Selection, or FPS), autoplay a sequence, **rotate** and pan images, and play a disc in reverse (useful for photos taken with cameras...

...intended for NTSC display, in practice the images overscan slightly, which causes them to be **cropped** on all sides.

The higher-priced models--the PCD 870 (\$449), the five-disc carousel ...
...zooming out to fit the full picture on-screen. With these models you can also **zoom** in on a selected area and scan through a disk, and they provide increased memory...

...ABSTRACT: percent higher resolution and the ability to hold up to 32 images. Images can be **downloaded** in standard file formats to microcomputers via a simple serial interface. The bundled Windows or...

...severely limited; users can and should paste images into a more sophisticated program for serious **editing**. The FotoMan's fixed-focus lens and automatic flash allow one-button photography and are...

...to establish the serial connection and display the layout view of a 16-image set; **downloading** the images takes approximately 3 minutes in TIFF format and 2 minutes in **compressed JPEG** format. Logitech provides convenient accessories including a drop-in desktop stand.

... portrait photography and resolution that has been increased by 67

percent, to 496 by 360 **pixels** . It provided **high** -quality **images** in PC Week Labs tests, due in part to improved flash control.

FotoMan Plus holds as many as 32 images and lets users **download** standard image files to a PC through a simple serial interface. We found that the bundled software (for Windows or the Macintosh) offers convenient but limited options for enhancing and **editing** images that can be pasted into documents or other work.

Logitech now offers photo accessories...

...for both DOS and Windows as well as a Windows-based program for enhancing and **editing** images.

The Windows-based camera-management software gives a convenient layout view of the images...

...seconds to establish the connection and display the layout view of a 16-image set. **Downloading** those images as TIFF files required slightly less than 3 minutes, and **downloading** in JPEG format took only 2 minutes.

The DOS utility program wasn't nearly as nice to look at, but it **downloaded** the same 16 images twice as fast as the Windows version when run from DOS...

...with no adjustable parameters.

We found that the more flexible adjustments of ZSoft Corp.'s **PhotoFinish** 2.0 software produced far superior results, and we predict that only the most casual...Windows version required a full-screen session to accurately preview pictures in FotoMan's memory.

Transfer speeds for both utilities under OS/2 were incredibly slow, requiring 2 minutes and 30 seconds to **transfer** only three JPEG files. Speeds were 13 times slower for DOS under OS/2 than under native DOS, and 30 times slower for Windows. The image- **manipulation** tools ran properly, however, in OS/2 2.1's Windows emulation.

It took about...

... is that Kodak had replaced the back cover with a digital imaging back, to capture **high resolution** color or monochrome **images** . The resolution of the full frame 35mm image is 1.3 million pixels (1024 x...

...The DSU is a 200 megabyte disk that stores up to 158 uncompressed or 600 **compressed images** . The DSU has a four inch monochrome monitor for immediate viewing and a keyboard for captioning with up to 10,000 characters for each image. The images can be **downloaded** to an Apple Macintosh computer, **edited** with Adobe Photoshop software and then printed.

While many amateur photographers might like to get...
...office and computers. The camera will store up to 50 images, before having to be **downloaded** to a PC or Macintosh computer. The exposure index

range from 100 to 400 for...

...white model and 50 to 200 for the color model.

Printing

Once the image is **downloaded** to a computer it can be printed on several different types of continuous tone printers...

...high end of the performance and unfortunately also the cost scale are the sublimation dye **transfer** printers. These printers by Kodak, Hitachi, Tektronix and others offer near photographic quality images. The...

...of the amateur photographer.

There are other types of printers, ink jet, color wax thermal **transfer**, color laser and color dry silver printers. These printers (with a cost of a few...system will provide for rapid retrieval and display of images, consistent image quality, powerful image **manipulation**, access to high quality printing, and support for current and future television formats.

The Photo...

...create a Photo CD you have to take your photographs, text and music to a **photofinisher**. Using the Kodak Photo CD Imaging Workstation (PID), the **photofinishing** lab can create your Photo CD. The cost quoted in initial articles on the system was about \$20 for the first 24 images. Although, one **photofinisher** in the Washington, DC area has quoted a price as high as \$1.79 a...

...and rich this system costs just less than \$ 100,000. Clearly designed for the professional **photofinisher**, not yet priced for the amateur photographer.

Software

All computers need software to run, and there are many photo retouching, image **editing**, and color painting software packages for the home computer user on the market today. One...

...relatively inexpensive (about \$600) software package allows Macintosh or PC computer users to retouch and **edit** digital images.

The example photo of a U.S. Government building was used as a...

...500) and the Photoshop software. The photograph was scanned into the system as a color **image** at a **low resolution** of 150 dpi. The buildings on the left and right were removed from the picture...

...added. The final image was printed from PageMaker on a Tektronix Phaser II thermal wax **transfer** printer at 150 dpi.

The Future

Digital electronic imaging is here to stay. Cameras, scanners...local camera clubs. Bob is a PSA District Representative, the new Mid-Atlantic Zone news **editor** for the PSA Journal. Ron is a PSA Area Representative.

RECORD TYPE: FULLTEXT; ABSTRACT

WORD COUNT: 3134 LINE COUNT: 00246

True-color image- editing software: darkroom, R.I.P.? (Aldus Corp.'s PhotoStyler 1.1a, Image-In Inc.'s...

...Image-In-Color Professional 3.0, U-Lead Systems Inc.'s ImagePals, ZSoft Corp.'s PhotoFinish 1.01 and Publisher's Paintbrush 2.02, Micrografx Inc.'s Picture Publisher 3.1 and PixaArts Corp.'s PixaFoto)(includes related articles on rating processes, Editors ' Choice selections and performance testing procedures) (Software Review) (overview of eight evaluations of image processing...

...ABSTRACT: Image-In-Color Professional 3.0, U-Lead Systems' \$249 ImagePals, ZSoft Corp's \$199 **PhotoFinish** 1.01 and \$495 Publisher's Paintbrush 2.02, Micrografx Inc's \$495 Picture Publisher 3.1 and PixaArts Corp's \$895 PixaFoto image processing software packages are evaluated. PhotoStyler, **PhotoFinish** and Picture Publisher all receive **Editors ' Choice** ratings for their powerful image **editing** features.

Image- **editing** software can transform those less-than-optimal scans into perfect pictures. Think of the eight products in this review--Aldus PhotoStyler, Image-In-Color and Image-In-Color Professional, ImagePals, **PhotoFinish**, Publisher's Paintbrush, Picture Publisher, and PixaPhoto--as electronic darkrooms. In traditional photographic darkrooms, artists...

...a selection area or mask, a feature that exponentially increases the flexibility of an image- **editing** package. They include tools--such as airbrushes, cloning, and special-effects filters--to retouch or artistically **enhance** pictures as well as sophisticated filters to adjust a picture's tonal range or color...

...product from this roundup.

At first glance, it may be difficult to distinguish these image- **editing** products from competitors, which include image-processing utility programs as well as high-end paint...

...bitmapped graphics applications, so some overlap is inevitable; and in truth, paint programs and image- **editing** software are more alike than they have ever been.

Mathematica's Tempura Pro, for example...

...the products reviewed here and image-processing utilities are more subtle. HALO Desktop Imager, our **Editors ' Choice** winner when we last reviewed image-processing programs ("Capture and Conversion the Windows Way ...

...a poor scan, nor does it contain editable color/gray maps, which allow you to **edit** a specific tonal range (such as midtones) separately from other ranges (such as highlights and...

...eight products reviewed here target specific audiences through feature set and price. Products such as **PhotoFinish** (\$199), from ZSoft Corp., and ImagePals (\$249), from U-Lead Systems, are clearly intended for...

...advanced programs let you treat the selection area as a mask, meaning that you can **edit** the shape, invert the active area, and export or import masks for future use. Picture...

...marquee as a vector outline, which makes it possible to transform the shape with curve- **editing** tools. And while PhotoStyler uses a bitmapped mask, it is easy to fine-tune a...

...or deleting from the current mask using any of the selection tools. Compare this with **PhotoFinish**, which doesn't allow you to use a selection area as a mask to constrain...

...background.

Often entry-level products trade off some power in favor of convenience. For instance, **PhotoFinish** contains an easy-to-use tinting tool that lets you apply translucent color with a...

...than the current color.

Arbitrarily defining yourself as a power user or as an image- **editing** tyro is a bad way to choose a program. A much more sensible approach starts ...

...of your role as production manager, photographer, or designer. For example, if you see image **editing** as part of the production process, you will want retouching and correction tools. The abilities to analyze the distribution of tonal values via a histogram, directly **edit** color or gray maps, and apply filters like Despeckle or Sharpen that can clean up...

...Aldus Gallery Effects as a plug-in application.

In most cases, you will use image- **editing** programs to prepare your pictures for hard- **copy** output. All of the programs here can **send** files to a laser printer. But if you want bright, clean printouts, look for programs...

...such as Picture Publisher, Image-In-Color Professional, or PixaFoto. These are the only image- **editing** products that provide useful controls for print production--such as under-color removal (UCR), gray...

...power of the test-bed, speed was a major issue. For example, the ZSoft products-- **PhotoFinish** and Publisher's Paintbrush--were so slow that we were forced to drop the resolution...

...Publisher were the only programs in the roundup that could deliver satisfactory performance with several **high - resolution**, 15MB **images** displayed simultaneously. On the whole, however, the Microsoft Windows-based products in this roundup outperformed...

...follow is that you need twice as much memory as the largest image to be **edited**. That means you need large amounts of hard disk space (for virtual memory) in addition...

...programs are especially sensitive to SMARTDRV and swapfile settings.

To judge the performance of image- **editing** software accurately, in terms of both speed and functionality, you must consider programs written for...

...Mac Hegemony").

For years, everyone has been asking the same questions about PC-based image- **editing** software: Will these programs ever totally satisfy quality-conscious production managers? Can automated calibration routines ...

...the definitive answer to these questions, and the answer is yes.

Suitability to Task: Image- **Editing** Software

To test the mettle of these packages, we used them to process three images...

...photograph. In the process, we tinted and altered the background to test the basic image- **manipulation** capabilities, then annotated the image to test the text handling.

The second procedure involved integrating...

...essential first step for photo retouching. You'll also want flexible tonal-adjustment capabilities to **enhance** the highlight, midtone, and shadow areas of an image, and effective global filters (such as...

...A simple but attractive set of fonts allows you to annotate your images.

For creative **editing**, you'll want at least the same tools as for photo retouching. Beyond the basic...

...robust set of painting tools is essential for those who desire true creative flexibility.

Hard- **copy** output can range from a simple black-and-white printout on a PCL5 printer topackages on the quality of their color separations.

When **editing** a file for electronic output only--for use in an image database or presentation, for example--the abilities to resample down to a smaller resolution, to **compress images** drastically, and to perform various types of palette optimization and color reduction become very important. In addition, image-management and browsing capabilities can be a great help.

EDITORS ' CHOICE

Aldus PhotoStyler

PhotoFinish

Picture Publisher

While three **Editors** ' Choice awards out of a field of eight might seem a bit much, each selection...

...PhotoStyler and Micrografx's Picture Publisher are very different products, but both offer powerful image- **editing** tools.

At \$795, PhotoStyler has strong painting and masking capabilities; it is the only product...

...and a moderate cost of \$495, Picture Publisher represents an excellent value.

ZSoft Corp.'s **PhotoFinish** has its flaws--an inability to work with large files, for one--but for \$199...

...with some high-powered tools thrown in for good measure. Once ZSoft adds some of **PhotoFinish** 's functionality to the more expensive Publisher's Paintbrush (\$495), that program may become more...

...to ImagePals, a \$249 product that uncomfortably straddles the worlds of graphics utilities and image **editing**. Although it is probably the weakest of the group for image **editing**, its excellent screen-capture and image-management tools make it a welcome addition to the...

...next version of the product will support a broader range of adapters.

Performance Tests: Image- **Editing** Software

Picture Publisher clearly won for overall speed. But our tests turned out to be...

...fastest of these packages can leave you with plenty of time for lunch breaks during **edit** operations on large images.

HOW WE TESTED

We evaluated these products on Compaq Deskpro 386...

...by 9-inch 300-dot-per-inch scanned image (approximately 12.5MB of image data).

PhotoFinish and Publisher's Paintbrush were unable to work with files this large without locking up the machine or taking more than 30 minutes to run.

The Arbitrary Angle **Rotate** test measures the time it takes to **rotate** a selected region 153 degrees. We approximated the angle in Picture Publisher because the package...

ABSTRACT:

...industry worldwide, is rushing to set up Web sites to develop film or let people **send** photos via e-mail to friends and create virtual albums, or offer some combination of...

TEXT:

WHEN Andrea Millrad **sent** a roll of film to Seattle FilmWorks, an Internet-based processor, she didn't know...

... www.filmworks.com) into her business. She views clients' photos online, with the option of **ordering prints** herself or simply **downloading** them into her computer for use later.

There is a land rush of sorts among...

...now there are more than 115 sites set up to develop film or let people **send** photos via e-mail to friends and create virtual albums, or to offer some combination...

...developing film and making prints and digital images to allowing customers to store, share and **edit** photos. Some sites can even put your pictures on products like T-shirts or cookies...

...additional set of 25 shots is \$4.95.

A customer can share digital photos by **sending** single images by e-mail or **sending** links that will take the recipient to a whole folder of

photos. **Prints ordered** over the Web and mailed to the customer cost 99 cents for a 4-by...

...print. Shipping charges are \$2.95 per film order. Fuji expects to allow customers to **upload** and store their own digital images on fujifilm's Web site around the end of...

...online free and can buy additional storage at \$1.49 for each block of 30 **images**. **Low - resolution** digital **images** can be **downloaded** free, but **downloading** a high-resolution version costs \$1.

People who are not AOL members can find virtually...

...30 days) through Kodak's PhotoNet.com (www.photonet.com). It allows a customer to **upload** and store digital images, but imposes the same \$5.95 fee it charges for developing a roll itself.

In general, **photo - sharing** sites allow you to create a password that you can **send** to friends or family so only they can see your online photos. But look into...

...unless otherwise instructed. And anyone who can see one of your pictures can order a **copy**.

If you own a digital camera or a scanner and do not need photo developing, try **uploading** -only sites, like Shutterfly.com (www.shutterfly.com) and Zing (www.zing.com). These sites, like all photo sites that offer **uploading**, say that it is easy to **send** them your own digital images. How easy it is may depend on how well their...

...easy a site is to use is to try it out.

The quality of the **prints ordered** online will rely partly on the resolution and quality of your camera and partly on...

...one made from regular film, though others have found inconsistent results at some sites.

A **low - resolution image** can produce a decent 3-by-4-inch print, a medium-resolution image can be good at 5 by 7, and a **high - resolution image** will probably work for sizes up to 8 by 10. Most of the Web sites...

...offers unlimited free storage with no time limit. The site also lets users do simple **editing** of images. Pictures can be rotated, **cropped** and corrected for brightness or color. Zing says it will soon add a special-effect...

...will make a photo look like a painting. (Anyone who wants to do extensive photo **editing**, however, would do well to purchase a full program, like those from Adobe or Corel...

...aim to attract photographers of all stripes by both handling film finishing and letting customers **upload** images.

PhotoWorks charges \$12.25 (plus \$1.49 shipping per order) to develop up to 36 exposures for 3-by-5 prints, post medium-resolution images online and **send** you a replacement roll of film (www.photoworks.com). The film is mailed to PhotoWorks...

...least one print every six months. For an additional \$4.95, the company will put **high - resolution images** on a CD that is mailed to the customer and post them on the Web as well for free **downloading** for 15 days. Digital **uploading** and storage is free. Prints are 25 cents each for either 3-by-5's...

...6's, and 8-by-10's are \$1.95 apiece, plus shipping.

PhotoWorks provides **uploading** software that includes a function to

remove **red eye** . More advanced **editing** functions are available free on **downloadable** software.

Club Photo, which offers film developing through a company it recently purchased, Signature Color...

...for 24 3-by-5 prints to \$13.95 for 36 5-by-7 prints. **Uploading** digital images is free, and the company says that storage space is free, unlimited and...

...can set up a slide show. It also offers Photo to Go, which lets you **download** pictures to a Palm or Handspring personal digital assistant so you can present a tiny...

...99 cents for a 5 by 7 and \$2.99 for an 8 by 10. **Uploading** digital images is free, and the company says its storage is unlimited, permanent and free. Ofoto also offers free software, called Ofoto Now, for **editing** . It lets users remove **red eye** and **crop** and lighten images.

Many of the photo sites offer a cornucopia of goods that can...

**THE VERY LATEST ELECTRONIC GEAR FOR AFICIONADOS COMPUTERS, CAMERAS, VIDEO
PHONES LEAD THE LIST IN HIGH-TECH GOODIES**

Miami Herald (MH) - Sunday, December 7, 1997

By: ROY BASSAVE Herald Staff Writer

Edition: Final Section: Home Page: 8H

Word Count: 1,966

TEXT:

...for that discriminating person on your list?

The home electronics industry is sizzling. Dealers have **ordered** \$72.7 billion in **goods** this year, up from \$68.4 billion last year, according to the Consumer Electronic Manufactures...

... cards or internal memory chips like other digital cameras. Each floppy holds up to 40 **low** -resolution **images** or 20 **high** - **resolution** ones. The on-screen and printed-picture quality is good, depending on light source and weather conditions. Other features include an extra-large 2.5-inch LCD screen, 10X **zoom** , 640 by 480 resolution, and excellent controls.

Price: \$800. Information: Call 1 (800) 222-SONY...

...projector to feature full DVD compatibility and 3D/YC digital circuitry; it also has a **zoom** function and can project in such wide-screen formats as 4:3, 16:9 and...

... a 13.8-inch desktop screen. All are perfect for the graphic artist or video **editor** who needs the best tools, and can afford them.

Prices: LCD1400, \$2,699; LCD2000, \$7...

... you make video phone calls from your PC, plus take video snapshots that can be **sent** by e-mail or put into any word document. Super-clear video makes a great... of high-end fixed hard-disk systems. Good for for DVD mastering, photo archiving, film **editing** and more.

Price: \$599 with one 4.7-gigabyte cartridge; additional cartridges cost \$199. Information...

... speaker/receiver unit, an 18-hour rechargeable battery, a battery charger/AC adapter and a **transmitter** .

Optional add-on speaker/receiver units (W412) and batteries (W411) are available. One **transmitter** can **send** to an unlimited number of speakers.

Price: \$279.99. Information: 1 (800) 732-6866, 8 a.m. to midnight; on the Web at (<http://www.recoton.com>).

* Video **editors** . **Edit** those miles of 8mm home videotapes. Videonics offer the Thumbs UPeditor, which remembers up to 40 sections for quick one-step **editing** . For higher-tech types, the Home Video Producer combines the functions of a video **editor** , titler and graphics-and-special-effects generator.

Price: Thumbs UP: \$199; Home Video Producer: \$329. Information: Call 1 (800) 338- **EDIT** (3348) or on the Web at <http://www.videonics.com> .

* Color printers. Canon's BJC...

MediaWay announces first managed access to image libraries over the world wide web

Fields, Stacey

PR Newswire (New York, NY, US) p1

PUBL DATE: 960910

WORD COUNT: 1,019

DATELINE: Santa Clara, CA, US, Pacific

TEXT:

...efficiently we have chosen MediaWay's MediaAssets software because it is expressly designed for storage, **manipulation** and inspection of multimedia data. Its client-server implementation supports the Macintosh and Windows clients...

...over the Web to locate images that meet their criteria.

Once users locate their desired **images**, they can **download low resolution** versions for placement in documents and layouts. Further, users can send messages containing image thumbnails...

...recipient can directly access the original image to, for example, write a CD containing the **high resolution** version of the **image**.

Simplified QuarkXPress Layout Management

Users frequently want to locate images based on where they have...

...and out of the system in a single step. Users can automatically switch between the **high** and low **resolution** versions of the **images**: the XPress documents can be **edited** using low resolution images, and then the completed documents checked out of the system with **high resolution images** to go to production.

Automated Archiving and Retrieval

MediaAssets 1.5 introduces sophisticated capabilities to...

...too large to be viewed without scrolling.

There are good reasons for storing and sending **high - resolution images** like these -- you or your correspondent may want to print high-quality images. But for...

...point of most e-mail attachments -- a smaller image is better.

I typically use photo- **editing** software to reduce a photo from my camera to half its original size or less...

...or less.

The second issue is the format in which the picture is stored. Photo- **editing** software will usually save a picture from a digital camera or scanner in an uncompressed...

...up a lot of disk space and download time.

For e-mail use, save a **copy** of your **photo** in the **compressed** **JPG** format, which throws away some of the information, but not enough to be noticed on...
